

V-Series Fabric Diffuser

BENEFITS

- Creates optimum airflow patterns favorable for labs and healthcare critical workspaces
- Capability to direct and customize airflow patterns to maximize ventilation effectiveness
- Enhances dilution and removal of airborne contaminants to improve safety and better protect occupants
- Able to eliminate undesirable air currents that might affect safety and occupant comfort
- Reduce airflow requirements and energy consumption up to 50%

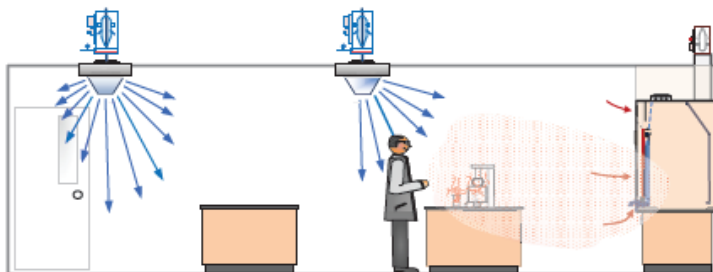

FEATURES

- 360° Airflow Coverage
- Directional Displacement
- Low Flow Supports Environments Operating as Low as 2 Air Changes per Hour (ACH)
- Proven Performance
- Low Flow Control of Airborne Pathogens
- Removable Fabric Face
- Ventilation Effectiveness Verified
- Maintenance Elements Accessible Below the Ceiling
- Up to 70% Recycled Content

V-Series diffusers can be located and configured to deliver the required airflow in the most efficient placement to direct and help remove airborne contaminants with lower total flow

Labs and Critical Workspaces

Hospitals and Healthcare Facilities
